Meeting Minutes 27 January 2004

Autumn A Cuellar

- Action Items:

    - MathML+: No action taken. Discussion of a library of functions; CellML (or rather MathML+) compiling into computed variables.

    - Physiome.org.nz to CellML.org issue: Poul doesn't like idea of cellml.org having the same layout as Physiome.org.nz because though the IUPS Physiome Project is the umbrella project for CellML, many people who use CellML have nothing to do with Physiome Project. There's still the problem that Peter has with wanting people who arrive in the cellml.org website from physiome.org.nz to be able to get back to the Physiome Project website. Use cookies maybe? Autumn, talk to Srdan about it. Interim solution is to have a link at the top of the cellml.org menu in the Physiome Project website's colors.

- Matt's update: Importing Mike Lovell-Smith's anatomy data.

- Poul's update: Still working on Road Map. He hopes to have it ready for us to look at next week.

- TBD on CellML discussion list: API documentation (high priority). Language development and how the models in the repository should be critiqued. Tool development, such as where tools are, what we're developing, and what we have on the priority list. Autumn, check that Nigel Lovell and Socrates Dokos are on the discussion list. Matt will initiate discussion.
